Welcome Video or Screencast Course Tour Assignment

Module 8
Due Date:
Point Value: Max. 80 points

Learning Objectives (Course and Module Objectives)

You will

- Apply instructional design principles and strategies and professional policies to the web-based courseware design. (CO #1)
- Design web-based instruction that incorporates perspectives and needs of diverse groups including universal design and accessibility. (CO #3)
- Prepare useful materials to launch your course. (MO)
- Explain course organization and navigation. (MO)

Purpose

All instructors should create a brief **3-8-minute** video introduction for their course container. This video will introduce learners (or students) to you, their instructor, as well as the purpose and objectives of the course. It will also help orient students to the way in which the course container is set up and will be used during the course.

For online learners, this video is an important way for them to get to know their instructor. Providing this personal touch at the beginning of the course makes a significant impact on the learners' experience and level of investment during the rest of the course.

Directions

1. In a word processor file, write down your **welcome video or screencast course tour script** (to remain focused while recording the video) that you will say in your welcome video. With a full script, you can easily add captions to your video. To make multimedia in your course accessible to people who have disabilities, you must add captions.
2. You can use any video recording tool that you are comfortable with. Also consider the best tool option that matches with the course tool you are working on.
3. Your **welcome video should**:
    - Be **short and engaging**. Remember, you want to motivate your students and not overload them with too much information. Short and concise is best. Try to make your videos no longer than ten minutes.
    - Show your **personality and speak naturally**. You should talk about why you enjoy the subject matter and include a little about your professional experience.
    - Include your **expectations for behavior and participation**.
    - List your **availability and communication expectations**. Let students know you are available tor virtual office hours, if applicable. Reinforce to them that questions and concerns about the course are welcomed.
    - Let students know your expected **response time for emails and postings**, and when grades are available after a deadline.
    - Consider showing students exactly **how to get started in your course**. Steer them toward the syllabus, then discuss where to go in the course container after that.
    - According to the **Quality Matters standards** for online courses, an instructor self-introduction should include the following characteristics and information:
        - The initial introduction creates a sense of connection between the instructor and the learners. It presents the instructor as professional as well as

approachable and includes basic information such as the instructor's name, title, photo or other visual representation, field of expertise, email address, phone number, and virtual office hours. Reviewers, look for a self-introduction that is professional in content and tone and that includes contact information.

4. Some **extra tips** for successful welcome video are:
    - Make sure to use a quality webcam and microphone.
    - Sit relatively close to the camera-this helps students read your nonverbal cues and facial expressions.
    - Make eye contact with your audience by looking into the camera or webcam. Don't concentrate on the script or watch yourself in the computer.
    - Use a plain, light background and wear dark, contrasting clothing with little pattern.
    - Add a light in front of you instead of behind you. Your face and background will be crisp and clear. However, if you can use lighting from multiple points in the room, you will look even better.
    - Find a quiet place to record where you and your audience won't be distracted.
    - Speak as you do in a face-to-face classroom, i.e. engaged, with enthusiasm for the subject.
    - Add visual aids whenever possible.
    - Conduct a practice video first. Critique yourself, make adjustments, and record again until you are comfortable with the final product.
5. Post the Welcome Video in the beginning of your course.

Assessment & Rubric

A-level work – (72-80 points) - Exceeds Expectations – Evidence of extended mastery of all student outcomes/competencies

- The welcome video contains all the requirement mentioned in the '**welcome video should**' part in the directions.
- All the tips mentioned before are also taken into consideration while making the video.

B-level work – (64-71 points) - Meets Expectations – Evidence of mastery of all student outcomes/competencies

- The welcome video contains most of the requirement mentioned in the '**welcome video should**' part in the directions but some minor points are missing.
- Most tips mentioned before are also taken into consideration while making the video.

C-level work – (56-63 points) - Developing – Evidence of partial mastery of one or more student outcomes/competencies

- The welcome video contains most of the requirement mentioned in the '**welcome video should**' part in the directions but some major points are missing.

D and F-level work – (0-55 points) - Does Not Meet Expectations – Evidence of limited or incomplete mastery of one or more student; outcomes/competencies or failure to attempt one or more student outcomes/competencies

- The welcome video does not contains most of the requirement mentioned in the '**welcome video should**' part in the directions and many major points are missing.
